MOHD KHAIRIL BIN AKUB

DATA ANALYTICS & BI PROFESSIONAL | POWER BI | POWER AUTOMATE | POWER APPS

Professional Summary

With 7 years of experience in Quality Engineering driving process excellence and operational improvements, I am now actively transitioning into data analytics and business intelligence to expand my impact through insight-driven decision-making. Building on my foundation in quality systems and continuous improvement, I have developed expertise in Power BI, Power Automate, and Power Apps to deliver end-to-end analytics and automation solutions. I specialize in transforming raw data into actionable insights through dynamic dashboards, streamlining workflows with process automation, and designing low-code applications that enhance efficiency and transparency. Backed by a Master's in Engineering Management and strong skills in SQL, DAX, and data modeling, I bring a unique combination of domain knowledge and technical proficiency which bridging operations, data analytics, and business needs to support digital transformation and organizational growth.

Certifications & Training

- Build Solutions with Power Apps, Power Automate & SharePoint | Udemy | Sep 2025
- Excel for Data Analytics | Analyst Builder | Dec 2024
- MySQL for Data Analytics | Analyst Builder | Oct 2024
- ISO 9001 & 14001 Internal Audit | BSI Group | Nov 2023
- Microsoft Power BI | Maven Analytics | Nov 2023
- Data Science Foundation Course | 360digitmg | Jan 2023
- AIGPE Minitab Beginner Certification | Advanced Innovation Group Pro Excellent AIGPE | Jun 2023
- Digital Leadership Development | PEOPLElogy Group | Oct 2022
- Applied Data Engineering | Fusionex Academy | Oct 2022

Projects & Accomplishments

- Digital Request for Inspection Application (Power Apps, Power Automate, SharePoint)
- Digital Crew Competency Verification System (Power Apps & Power Automate)
- Hazard Identification Report (HIR) Tracking (Power BI)
- Digitalization of QHSE Monthly Report (Power Apps & Power Automate)
- QAQC Dashboard (Power BI)
- E-Nerve Centre Dashboard (Power BI)
- Ops Quality Dashboard (Power BI)
- Automated NCR Reminder (Power Automate)
- Automated Data Storage from Microsoft Forms (Power Automate)
- Centralized Digital Inspection Checklist (VBA & Excel)

Digital Request for Inspection Application (Power Apps & Power Automate)

Overview:

The Digital RFI System was developed to transform a manual, paper-based inspection request process into a fully digital and automated workflow. Leveraging Power Apps, Power Automate, and SharePoint, the solution enhances efficiency, transparency, and compliance across inspection activities.

Key Features:

- **Power Apps:**

1. Mobile-friendly interface for submitting RFIs
2. Dynamic forms with role-based access (Requestor, Inspector, Approver)
3. Real-time status tracking

- **SharePoint:**

1. Centralized data repository for inspection requests
2. Secure document management and record history
3. Easy retrieval for audits and reporting

- **Power Automate:**

1. Automated multi-level approval workflows
2. Notifications and reminders via Outlook
3. Auto-generated tracking IDs for each request
4. Auto-scheduling system from one user to another user

Tools used: *Power Apps, Power Automate, SharePoint List, Microsoft Outlook, Microsoft Teams*

Impact:

- Reduced manual follow-ups and paperwork
- Faster approval cycles and improved accountability
- Increased visibility of inspection requests across departments
- Compliance with quality and operational standards
- Centralized digital records for audits and reporting

Digital Crew Competency Verification System (Power Apps & Power Automate)

Overview:

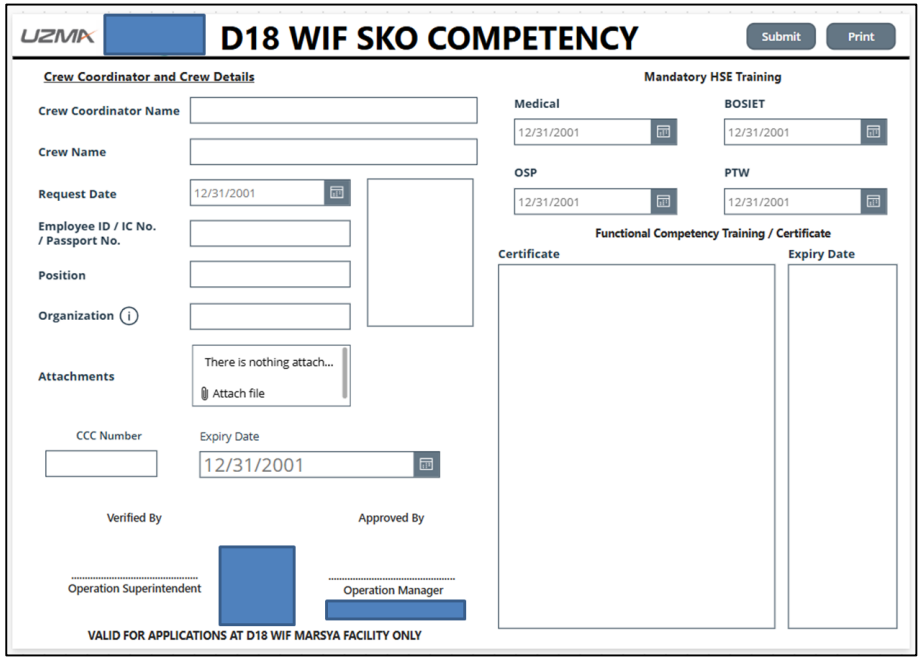
The D18 WIF SKO Competency Form is a digital solution developed to streamline the competency verification process for crew members working at the D18 WIF Marsya facility. This form digitizes the manual workflow of verifying HSE mandatory trainings and functional competency certifications, enhancing data accuracy, accessibility, and operational efficiency.

Impact:

- Improved transparency and standardization of competency records.
- Reduced administrative overhead by 80% and document errors.
- Supports fast, accurate verification during audits or inspections.

Key Features:

- **User-Friendly Interface:** Intuitive form layout for capturing essential crew information, including Coordinator Name, Crew Name, Position, ID/IC/Passport number, and Organization.
- **Mandatory HSE Training Section:** Date selectors for key certifications such as Medical, BOSIET, OSP, and PTW to ensure compliance.
- **Functional Competency Section:** Dynamic input for listing specific training certificates and corresponding expiry dates.
- **Dynamic Field Input:** Allows the approver the review the information and input their selection on the next approver and date within the adaptive card.
- **Automated Signature Workflow:** Includes designated sections for approval and verification by the Operation Superintendent and Operation Manager with digital signature placeholders.
- **Print-Ready Format:** Form is optimized for PDF printing with official layout, logos, and disclaimers ensuring it meets operational standards



Tools used: *Power Apps, Power Automate, SharePoint List*

Hazard Identification Report (HIR) Tracking (Power BI)

Link: HIR Tracking Dashboard

Overview:

This interactive dashboard offers a comprehensive view of Hazard Identification Report (HIR) performance of the three locations, HQ Tower, Kemaman Base and Labuan Base. It integrates data from Google Sheet which generated through the Google Form that submitted from the employees and it's provide real-time insights of the current HIR performance.

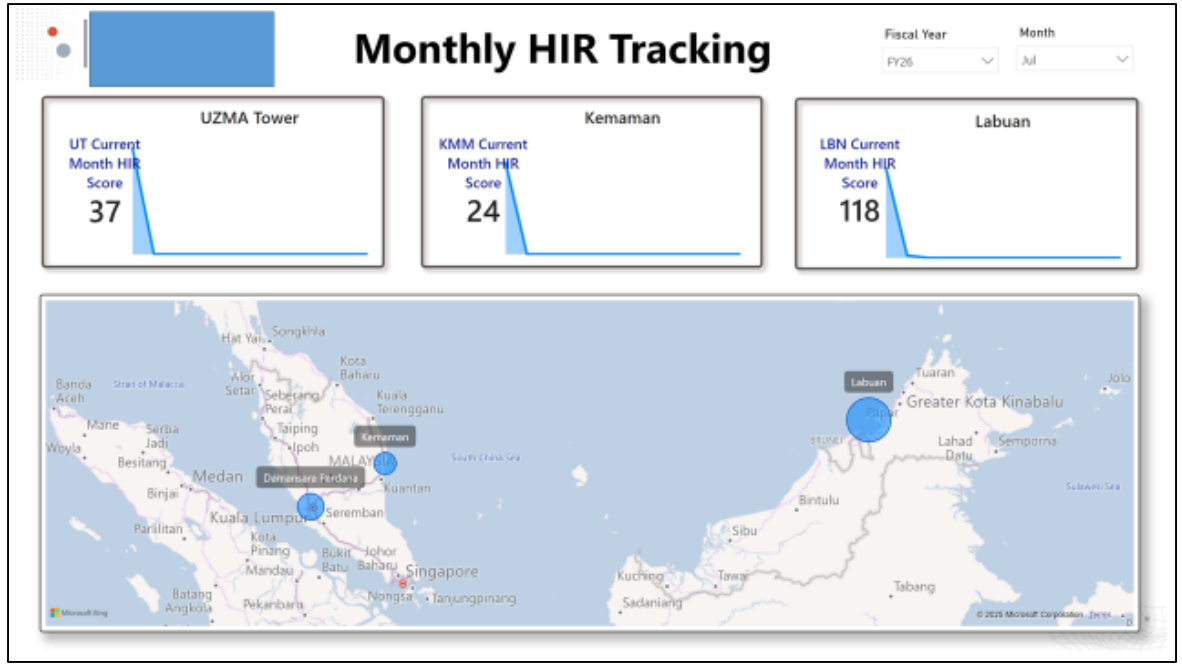
Impact:

- **Efficiency Gains:** Reduced manual reporting efforts by automating data collection and visualization.
- **Improved Compliance:** Enhanced tracking of HIR performance which led to better adherence to the safety standards.
- **Enhanced Visibility:** Created visualizations and reports that the current performance of HIR submissions.

Tools used: *Power BI, Google Sheet*

Key Features:

- **Real-Time Monitoring:** Track the HIR performance for each locations and stay up to date with current performance.
- **Interactive Visuals:** Utilize slicers and interactive visual for ease user experience performance.
- **Performance Trends:** Analyze historical data to identify patterns and areas for improvement.



Digitalization of QHSE Monthly Report (Power Apps & Power Automate)

Overview:

As part of our continuous improvement and digital transformation initiative, I led the development of a Power Apps solution to replace manual reporting workflows. The app streamlined data entry, enabled real-time tracking, and integrated with SharePoint for centralized data storage and Power BI for insightful visualization.

Impact:

- Reduced manual workload and data redundancy.
- Improved transparency and accountability with real-time tracking.
- Enabled remote reporting and review access across departments.
- Increased report submission compliance.

Tools used: *Power Apps, Power Automate, SharePoint List*

Key Features:

- **Multi-screen form navigation** with auto-filled user and date fields
- **Save as Draft & Submit functionality,** enabling users to complete reports in stages
- **Dynamic validation and duplicate entry prevention** based on user and reporting period
- **Automated email reminders and approval workflow** via Power Automate
- **Connected to SharePoint Online** for structured data storage

Past

Complete the word file → Convert into PDF → Send to HOD for review and compilation

Future

Add new item in SharePoint List → Automate approval send to HOD → Email notification on the approval and copy of document

QAQC Dashboard (Power BI)

Link: [QAQC Dashboard]

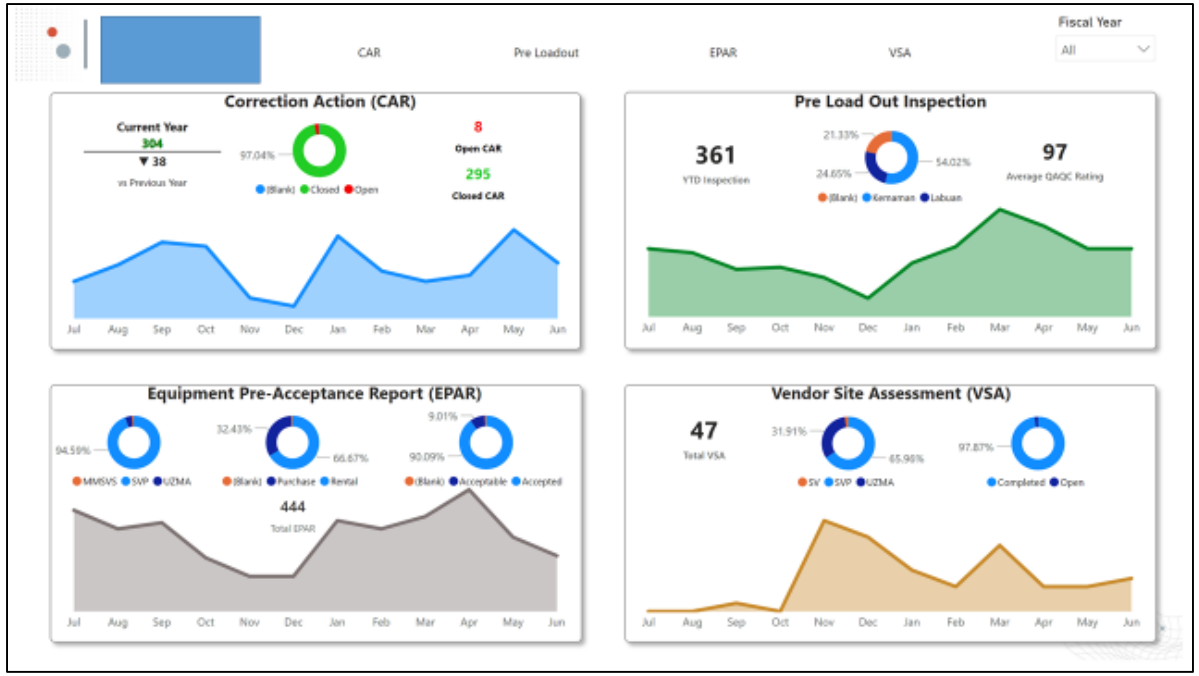
Overview:

This interactive dashboard offers a comprehensive view of Quality, Health, Safety, and Environment (QHSE) metrics, tailored for operational excellence in the oil & gas and manufacturing sectors. It integrates data from various sources to provide real-time insights into key performance indicators.

Impact:

- **Efficiency Gains:** Reduced manual reporting efforts by automating data collection and visualization.
- **Improved Compliance:** Enhanced tracking of safety and quality metrics led to better adherence to standards.
- **Data-Driven Decisions:** Provided stakeholders with actionable insights to drive continuous improvement.

Tools used: *Power BI, SharePoint List*



Key Features:

- **Real-Time Monitoring:** Track NCRs, audit scores, and safety incidents with up-to-date data.
- **Interactive Visuals:** Utilize slicers and filters to drill down into specific departments or timeframes.
- **Automated Alerts:** Receive notifications for overdue actions or critical incidents.
- **Performance Trends:** Analyze historical data to identify patterns and areas for improvement.

e-Nerve Centre (Power BI)

Link: e-Nerve Centre

Overview:

I designed a centralized digital dashboard to support operational excellence across multiple business processes. This dashboard serves as a hub for monitoring and managing key performance metrics, enabling plant managers and stakeholders to gain actionable insights from a single interface.

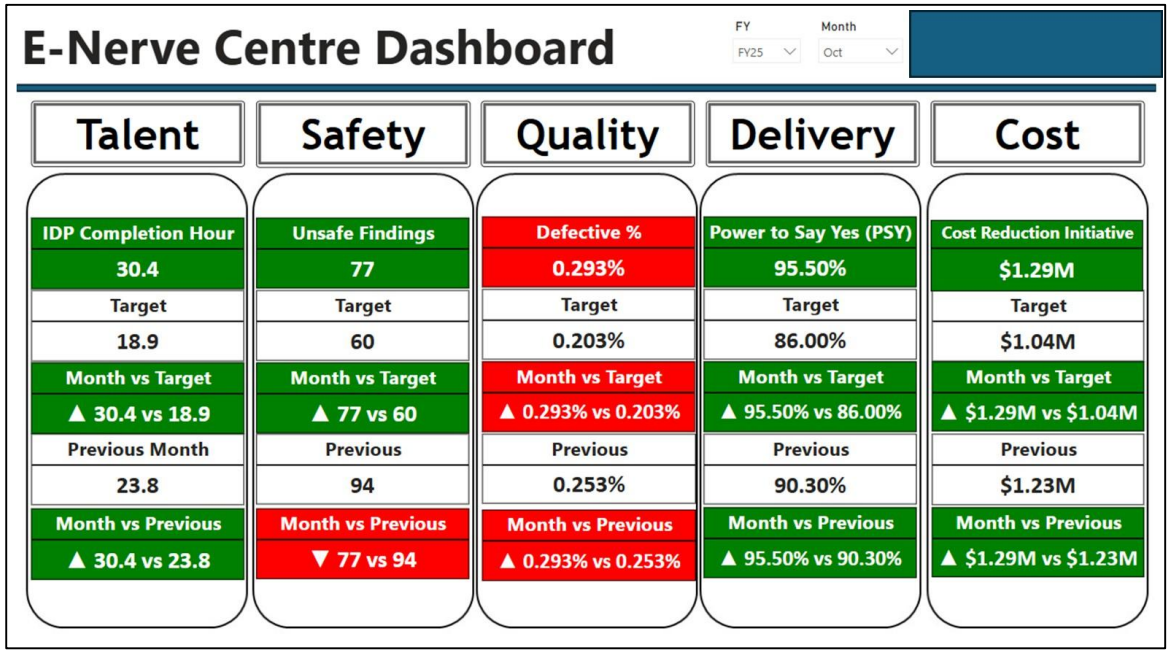
Impact:

This project improved data transparency and accessibility, reducing the time spent on manual data consolidation by 60%. It also supported faster decision-making by providing real-time insights into operational metrics.

Tools used: *Power BI, SharePoint, Excel*

Key Features:

- **Centralized Interface:** Developed a main page with intuitive navigation button.
- **Integrated Data Sources:** Consolidated data from multiple systems into one platform, providing real-time updates and reducing manual effort.
- **Enhanced Visibility:** Created visualizations and reports that highlight critical metrics, allowing stakeholders to identify bottlenecks and drive process improvements.
- **User-friendly Design:** Focused on a clean and accessible user experience, ensuring adoption by all levels of the organization.



Ops Quality Dashboard (Power BI)

Link: Ops Quality Dashboard

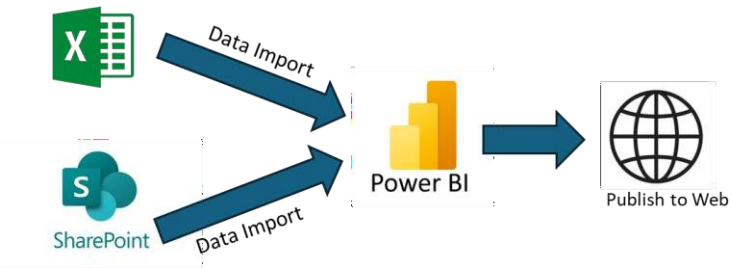
Overview:

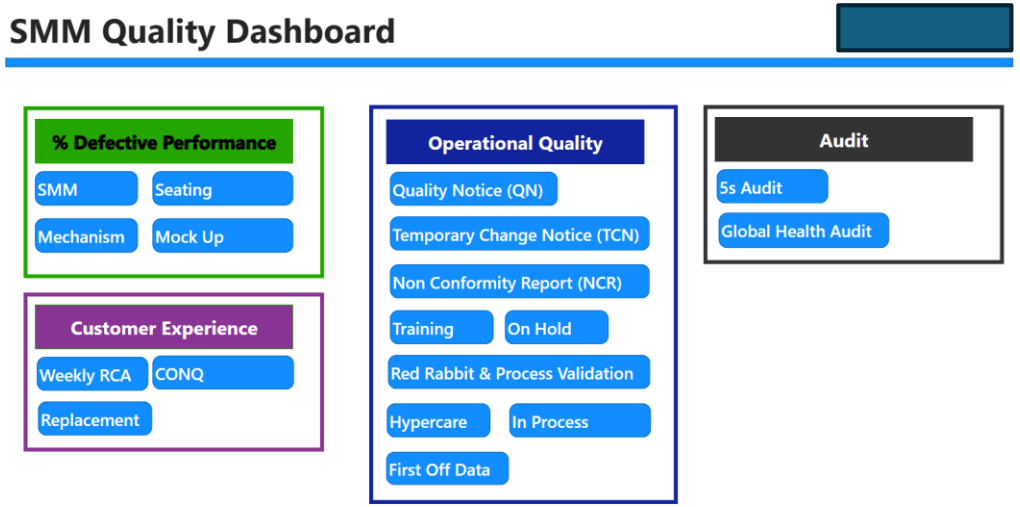
I developed an enterprise-wide quality performance dashboard using Power BI to consolidate and visualize data from various departments, providing leadership with a comprehensive view of key quality metrics. The dashboard is updated in real-time and includes data on defective percentages, customer satisfaction, and process improvements.

Impact:

This dashboard helped reduce defect rates by 40%, improved audit compliance, and shortened the resolution time for customer complaints. It provided leadership with real-time access to critical metrics, facilitating quicker decision-making.

Tools used: *Power BI, SharePoint, Excel*





Key Features:

- **Company-wide Quality Metrics:** Tracked the defective percentage across different production lines, enabling quick identification of areas needing improvement.
- **Customer Experience Monitoring:** Integrated weekly RCA review, Cost of Non-Quality (CONQ), and replacement orders into the dashboard, providing insights into the customer satisfaction levels and recurring issues.
- **In-Process Quality Tracking:** Monitored day-to-day quality activities like Quality Notices, NCRs, and production line issues, offering the team a real-time overview of ongoing concerns.
- **Audit Tracking:** Created a separate section for tracking 5S and health audits, allowing management to keep tabs on compliance and continuous improvement efforts.

Automated NCR Reminder (Power Automate)

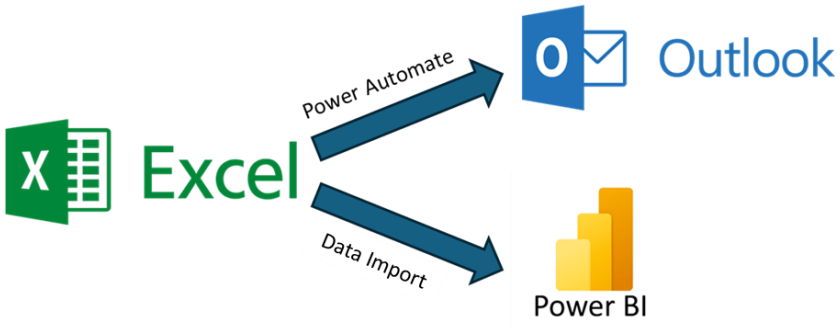
Overview:

I designed and implemented an automated notification system for Non-Conformance Reports (NCRs) using Power Automate. The system sends daily reminders to NCR owners and stakeholders, ensuring timely resolution and improving accountability within the team.

Impact:

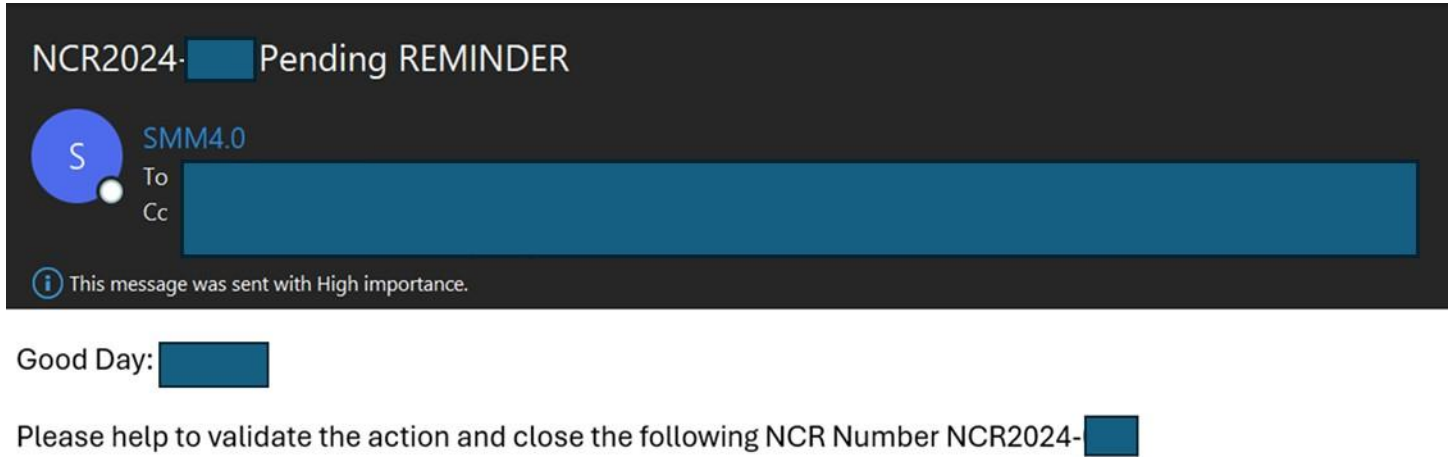
The automated system resulted in a significant improvement in NCR closure rates, reducing the average time to close NCRs by 60%. It also enhanced accountability and transparency by ensuring that unresolved issues were consistently monitored and addressed.

Tools used: *Power Automate, Outlook, SharePoint*



<u>Key Features:</u>

- **Daily Email Notifications:** Automatically triggers reminders to NCR owners, including details about the outstanding NCR and the required action.
- **Escalation Process:** If an NCR is not addressed within a set timeframe, the system escalates the issue to higher management for review.
- **Real-time Status Updates**: Integrated with the NCR management system, the tool automatically updates statuses and sends alerts when actions are completed or overdue.



Automated Data Storage from Microsoft Forms (Power Automate)

Overview:

This project involved automating the storage and management of data collected from Microsoft Forms. By integrating Microsoft Forms with SharePoint using Power Automate, I created a seamless data collection process that feeds directly into a Power BI dashboard, making the data instantly accessible for reporting and analysis.

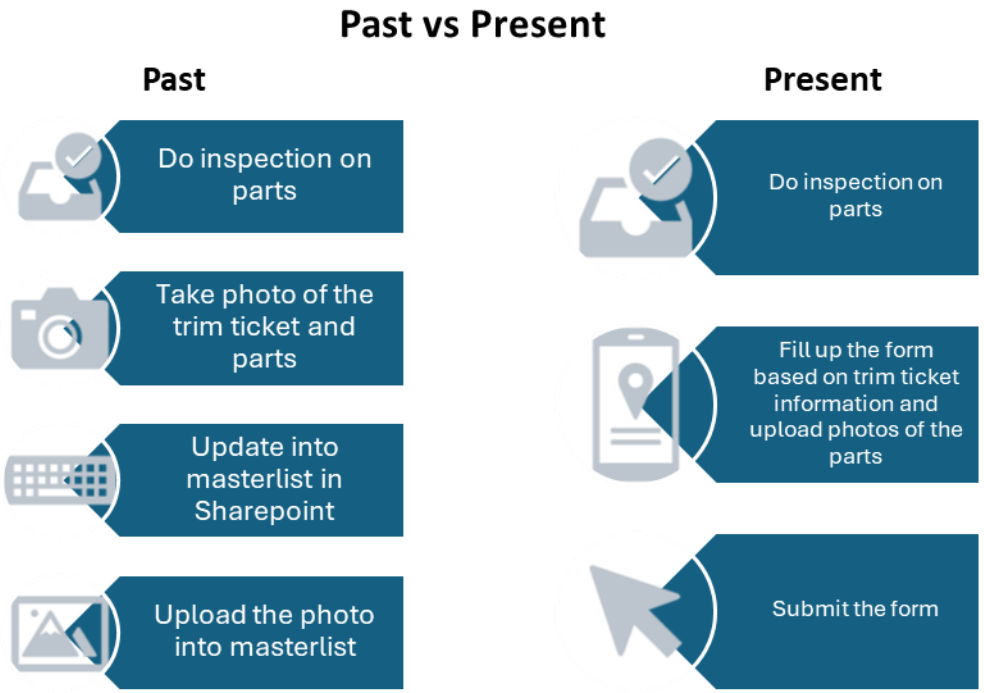
Impact:

This solution improved the data collection process, eliminating manual data entry errors and reducing administrative work by 90%. It also provided real-time insights into survey data, allowing management to act more quickly on important trends and feedback.

Tools used: *Power Automate, Microsoft Forms, SharePoint, Power BI*

Key Features:

- **Automated Data Flow:** Data entered into Microsoft Forms is automatically stored in a SharePoint list, ensuring all entries are captured without manual intervention.
- **Instant Power BI Integration:** The SharePoint list is linked to Power BI, enabling real-time visualization of responses and key metrics.
- **Custom Notifications:** Set up automatic notifications for specific responses, alerting relevant team members of critical entries that require immediate attention.



Centralized Digital Inspection Checklist (VBA & Excel)

Overview:

I created a digital checklist using Excel VBA to streamline the quality inspection process. This tool consolidates inspection data in a structured format and provides automated reporting and validation features. It also links to the quality management system for further analysis.

Key Features:

- **Automated Data Entry:** The checklist automates data validation, ensuring consistent and accurate data capture across inspections.
- **Inspection History Tracking:** Stores previous inspections in a database, allowing for trend analysis and comparison over time.
- **Integration with QMS:** Exported the checklist data to a central database, feeding into the broader quality management system for analysis and reporting.

Impact:

The checklist reduced the time spent on inspection data entry by 60%, improved data accuracy, and enabled more consistent tracking of inspection results. This system also facilitated easier auditing and compliance tracking.

Tools used: *Excel, VBA*
